/CLORE 1103 "OLIS-EDJI"
// Model 1103 "OLIS-EDJI"
// Modified polylinker; Site_1: ECOR I; Site_2: Not I;
UI-E-EJI is a subtracted cDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an ECOR I adaptor, digested
with Not I, and cloned directionally into pT773-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes, AGAATCAAGA;
iles, CGATTAGCGA; eye anterior segment, AATGCCGCA;
optic nerve, CCATTAGCG; retina, CGCGG; Retina Foveal and
Macular, GTCC; RPE and Choroid, ACCTA. This library was
created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI)."

The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL is useful in the investigation of cell proliferation, aging and

                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                          The present sequence is a DNA encoding tumour suppressor homologue protein, p31NG2 which is homologous to human tumour suppressor protein, p47NG3. The tumour suppressors of the invention are involved in the regulation of cell proliferation and in the control of cellular aging, anchorage dependence and apoptosis. The tumour suppressor protein, p47NG3, nucleic exide encoding it and antibodies against it are useful for diagnosis, prevention and treatment of tumours and cancers. The p471NG3 DNA is also used in gene therapy.

    The present sequence represents the human tumour suppressor gene INGIL. The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL is useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of cancer such as cancer of the colon, stomach, oesophagus or fallopian tube, and the screening of candidate drugs for the treatment of such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human lung-specific gene TSC430 overexpressed in cancer tissue, used for treatment of, e.g. colon tumour

```
This sequence encodes the human tumour suppressor (TUSUP) protein. The TUSUP sequence was identified from a human lung cDNA library. The protein is 240 amino acids in length and has one potential cAMP and CGMP dependent protein kinase phosphorylation site, nine potential protein kinase phosphorylation sites, five potential casein kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation sites, and one potential similarity to p33. TUSUP can be used to treat or prevent cancer, particularly of the reproductive or gastrointestinal tracts or of the immune system. Agonists of the TUSUP protein can be used to raise TUSUP specific antibodies and to screen for specific binding agents and potential therapeutic agents. The TUSUP nucleotide sequence can be used in gene therapy and as a source of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a combination comprising a number of substantially purified and isolated polynucleotides which are co-expressed with genes known to be involved in bone remodelling and osteoporosis. The invention is used to diagnose disorders associated with bone remodelling or osteoporosis, ABS70344-ABS70512 represent human bone remodelling genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A combination of polynucleotides which are co-expressed with genes known to be involved in bone remodeling and osteoporosis are useful an array for the diagnosis of bone remodeling and osteoporosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intext 5' ends and the contract of the contract o

This sequence was used to determine the sequence of the human tumour suppressor protein (TUSUP) see AAY52199. The TUSUP protein is 240 amino acids in length and has one potential cAMP and GGMP dependent protein kinase phosphorylation sites, ince potential protein kinase phosphorylation sites, five potential casein kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation site. TUSUP has structural and chemical similarity to p33. TUSUP can be used to treat or prevent cancer, particularly of the reproductive or gastrointestinal used to raise TUSUP specific antibodies and to screen for specific binding agents and potential herapeutic agents. The TUSUP nucleotide sequence can be used in gene therapy and as a source of diagnostic probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      325 TTATGGGGAGATGATAGGATGTGACATGAACAGTGTCCAATTGAATGGTTTCACTTTTC 266

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mutations in or loss of the p53 gene occur in more than 50% of human tumours and tumour cell lines, but functional inactivation of the p53 pathway occurs in a much larger proportion of tumours. In many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with ING1. Functional cooperation between ING1 and p53 suggested that ING1 encoded a tumour suppressor protein that functioned within the p53 pathway. This data suggested a possible role for ING1 in head and eck cancers and chromosomal location of the ING1 placed it cancers cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not revealed mutations in ING1 mor significant variations in its expression suggesting that ING1 was not a useful gene to study in cancer eriology. However, alternative initiation exons of the ing1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detecting nucleic acid encoding exon 1b of ingl, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gene, each having their own promoter have been discovered.

Expression of one promoter (1a) produces a protein identical to INGI. Expression of a second promoter (1b) produces a protein having an identical C-terminal fragment to INGI but an additional 104 N-terminal amino acids. The newly discovered protein has been chasigned by 1010 (Wild type: p31NGI) has the characteristics of an oncogene. When overexpressed in cells (even those expressing wild type p53) p37INGI is able to cause
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Grigorian IA;

                                             nucleic acid encoding exon 1b of ingl by hybridisation with an isolated nucleic acid having the sequence of exon 1b of ingl or its antisense sequence con identify individuals expressing the oncogenic form of ingl. Novel peptide sequences taken from the 104 N-terminal peptide of p37ING1 can also be used to raise antibodies that can also be used in detection methods for the p37ING1 variant. The polypeptides may be useful in gene therapy for treatment of cell proliferation disorders, especially cancers and for diagnosing and

Mutations in or loss of the p53 gene occur in more than 50% of human tumours and tumour cell lines, but functional inactivation of the p53 pathway occurs in a much larger proportion of tumours. In many cases the mechanism of functional inactivation of tumours. In remains unknown but p53 has been found to act in cooperation with ING1. Functional cooperation between ING1 and p53 suggested that ING1 encoded a tumour suppressor protein that functioned within the p53 pathway. This data suggested a possible role for ING1 in head can exert and encreased and encoded and encoded it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not revealed mutations in ING1 mor significant variations in its expression suggesting that ING3 was not a useful gene to study in cancer etiology. However, alternative initiation exons of the ing1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Detecting nucleic acid encoding exon 1b of ing1, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Expression of one promoter (1a) produces a protein identical to 1867. Expression of one promoter (1a) produces a protein identical to 1867. Expression of a second promoter (1b) produces a protein having an identical C-terminal fragment to ING1 but an additional 104 N-terminal amino acids. The newly discovered protein has been designated by 371NG1 wild type: 931871671. p371NG1 has the characteristics of an oncogene. When overexpressed in cells (even those expressing wild type p53) p371NG1 is able to cause proliferation or transformation of those cells. Thus detecting a nucleic acid encoding exon 1b of ing1 by hybridisation with an isolated nucleic acid having the sequence of exon 1b of ing1 or its antisense sequence can identify individuals expressing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   oncogenic form of ingl. Novel peptide sequences taken from the 104 N-terminal peptide of p371NG1 can also be used to raise antibodies that can also be used in detection methods for the p31NG1 variant. The polypeptides may be useful in gene therapy for treatment of cell proliferation disorders, especially cancers and for diagnosing and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -----CTGCTGAAAGTGAACGAGCCTCAG 473
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a human cancer associated antigen. The sequence is a variant of the ING1 gene, which is a tumour suppressor gene candidate. The cancer associated antigen polynucleotides and polypeptides are useful for screening for the possible presence of a pathological condition in a subject such as cancer. The cancer associated antigen polypeptides are useful for producing vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CTACGTGCAGGACTACCTTGAGTGCGTGGAGTCGCTGCCCCCACGACGTGCAGGAACGT

                                                                                                                                                                                                    8
                                                                                                                                           The invention discloses monoclonal antibodies which can be used, in combination, to specifically recognise epitopes of ING1 (inhibitor of growth 1) protein isoforms. ING1 is a tumour suppressor gene and its expression is regulated through the cell cycle, peaking in the S phase. Expression of ING1 is down regulated in breast tumours and lymphoid malignancies. Overexpression of a construct containing the ING1 gene is able to inhibit cell growth by reducing the fraction of cells which enter into the S phase. The monoclonal antibodies are useful for detecting an ING1 protein in a cell, which involves selecting a cell that ectopically or endogenously expresses ING1 protein. The anti-ING1 monoclonal antibody combination consists of two or more antibodies of CAbl-CAbl (not defined), preferably a mixture of CAbl-CAbd, which can detect at least two different isoforms of ING1. The antibodies are also useful for diagnosing a disease e.g. tumour or medical condition in an animal ansociated with abscrant levels of an ING1 protein. The sequence presented is the human inhibitor of growth I (ING1) isoform, and unman cDNA, library, which encodes a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1692
Mutations in or loss of the p53 gene occur in more than 50% of human tumours and tumour cell lines, but functional inactivation of the p53 pathway occurs in a much larger proportion of tumours. In many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with ING1. Functional cooperation between ING1 and p53 suggested that ING3 necoded a tumour suppressor protein that functioned within the p53 pathway. This data suggested a possible role for ING1 in head p53 pathway. This data suggested a possible role for ING1 in head can neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not cancers. Large scale analysis of tumours involving ING1 has not expression suggesting that ING1 was not a useful gene to study in cancer etiology. However, alternative initiation exons of the ing1 gene, each having their own promoter have been discovered.

Expression of one promoter (1a) produces a protein having ING1. Expression of a second promoter (1b) produces a protein having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Detecting nucleic acid encoding exon 1b of ingl, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1633 CCAAGTGCCGGGGGGAGAACGAGAAGACCATGGACAAAGCCCTGGAGAAATCCAAAAAAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     307 AGCGGTCCAGGAGGCAGCGAAACAATGAGAATCGAGAAACGCGTCGAATAATCACGACC 366
an identical C-terminal fragment to ING1 but an additional 104
N-terminal amino acide. The newly discovered protein has been designated p37ING1 (Wild type: p33ING1). p37ING1 has the characteristics of an oncogene. When overexpressed in cells (even those expressing wild type p53) p37ING1 is able to cause proliferation or transformation of those cells. Thus detecting a nucleic acid encoding exon lb of ing1 by hybridisation with an inclear acid having the sequence of exon lb of ing1 by conceptual expressing the or its antisense sequence can identify individuals expressing the oncogenic form of ing1. Novel peptide sequences taken from the 104 or terminal peptide of p37ING1 can also be used to raise antibodies that can also be used in detection methods for the p37ING1 variant. The polypeptides may be useful in gene therapy for treatment of cell proliferation disorders, especially cancers and for diagnosing and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a human cancer associated antigen. The sequence is the wildtype of the ING1 gene, which is a tumour suppressor gene candidate. The cancer associated antigen polynucleotides and polypeptides are useful for screening for the possible presence of a pathological condition in a subject such as cancer. The cancer associated antigen polypeptides are useful for producing vaccines.

A partial cDNA clone (AAT69651), designated ING1, codes for a novel tumour suppressor protein p331NG1 (AAM19118) that is a potent inhibitor of cell growth. It was isolated by subtractive bybridisation between normal mammary and transformed epithelial cDNAs, isolation of an antisense ING1 cDNA insert that caused increased call profileration, and use of the insert that caused normal human fibroblast and Hela cDNA libraries. A complete ING1 sequence (AAT69652) was obtd. by 5'RACE. ING1 is localised to the 1943-34 chromosome region, to which a number of human cancers have been mapped. ING1 nucleic acids can be used in the diagnosis of breast cancer; a decreased level of ING1 mRNA indicates cancerous cells. They can also be used in gene therapy methods to block the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAV62285 standard; cDNA; 1902

Modulating eukaryotic apoptosis by increasing p33ING1 activity -using p33ING1 derivatives, to induce apoptosis in cancer cells, and in the investigation of apoptotic pathways Following passage through a packaging line, normal mouse mammary spitherial cells were infected, and infected cells were injected into nude mice. Putative transforming fragments from tumours were isolated by PCR (see AAV62290-91) and subcloned into LNCX. An ING1 fragment was obtained and used to screen normal human fibroblast and HeLa cell CDNA libraries. 2. Clones were sequenced to obtain the partial ING1 sequence. The complete CDNA sequence (see This is the nucleotide sequence of a human ING1 (INhibitor of Growth) partial cDNA clone that codes for a pl33ING1 polypeptide (see AAM79674), a novel inhibitor of cell growth and a candidate tumour suppressor. ING1 is a new gene that is expressed in normal mammary epithelial cells, but which is expressed only at lower levels in several cancerous mammary epithelial cell lines and is not expressed in many primary brain tumours. To isolate ING1, a subtractive hybridisation of breast cancer cell line cDNAs was performed with cDNA from normal mammary epithelial cells, and subtracted cDNAs were cloned into retrovirus vector pLNCX. involves administering an antisense oligonuclectide. Also claimed are a method for determining the apoptotic characteristics of a eukaryotic cell, an assay for determining the level of p33ING1 activity in a eukaryotic cell, and an isolated eukaryotic cell substantially free of p33ING1 biological activity. The invention discloses ING1 derivatives or variants that may be used to induce apoptosis in eukaryotic cancer cells. AAV62292) was obtained by RACE. A claimed method to potentiate apoptosis in a eukaryotic cell involves administering an active p33ING1 peptide or an oligonucleotide encoding such as a peptide. A claimed method for inhibiting apoptosis in a eukaryotic cell Johnston RN, Riabowol K; (UYTE-) UNIV TECHNOLOGIES INT INC.
